

## Configuring Access 30 on Mac OS X (10.4) - Tiger

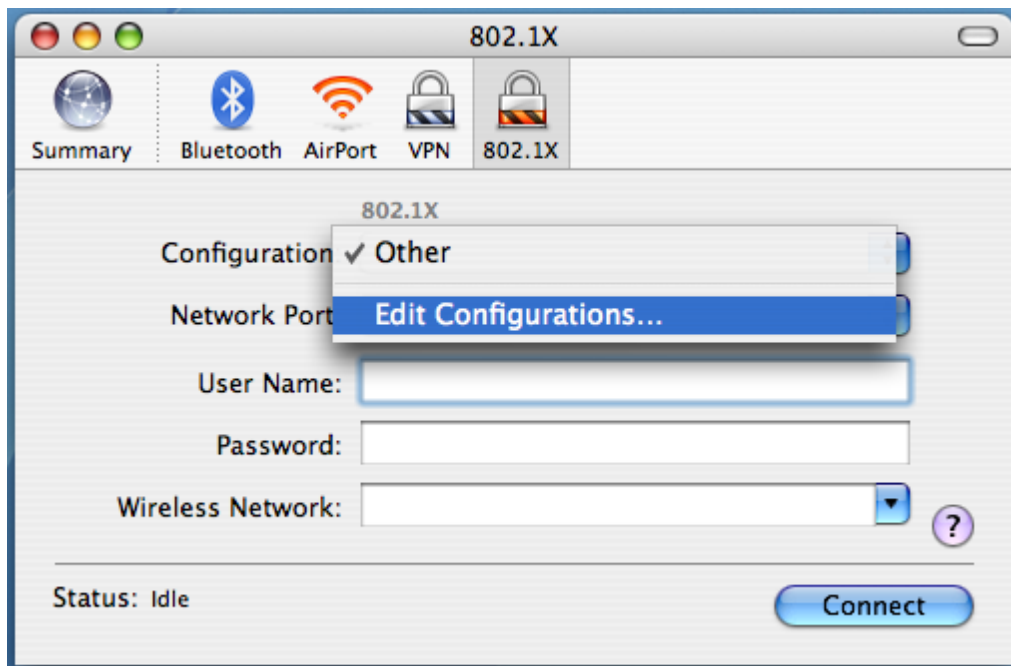

1. First select Internet Connect from the wireless icon in the menu bar (or from the Applications folder).

2. From the file menu select "New 802.1X Connection...".

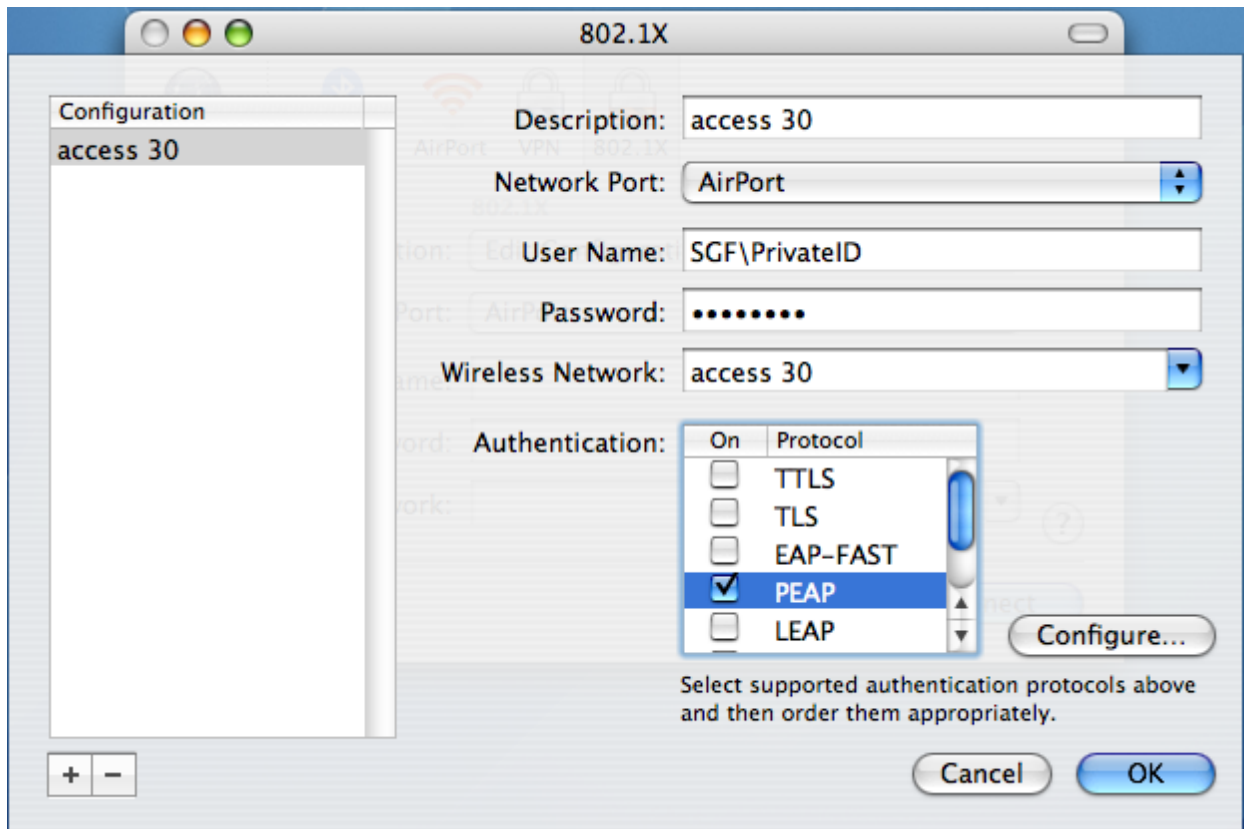

3. From the Configuration selection box choose "Edit Configuration".

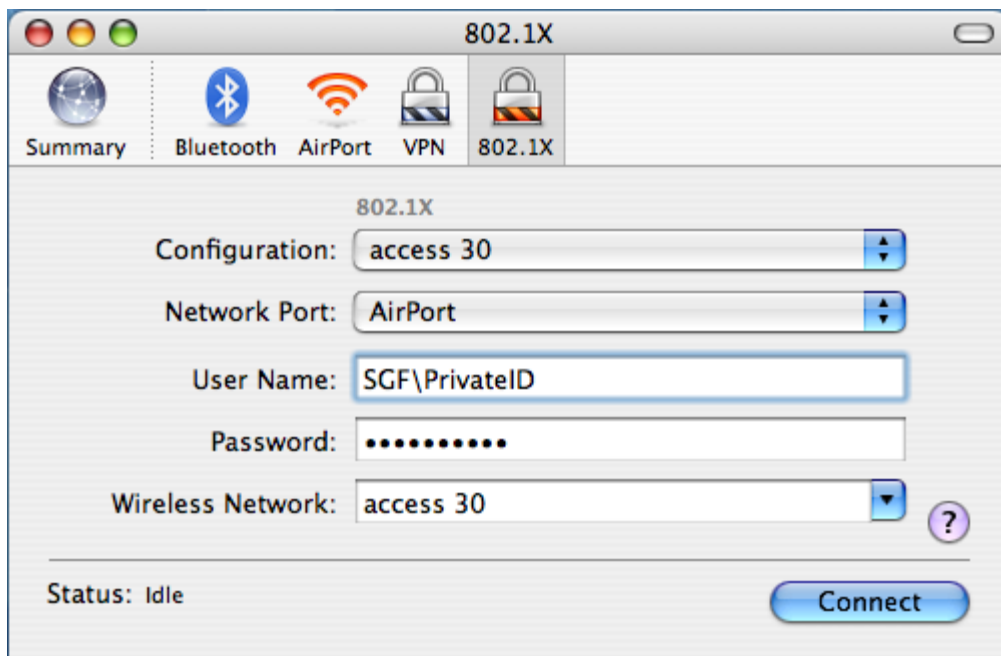

4. Next, fill out the Description, User Name (Private ID), Password, and Wireless Network fields as shown below.
  - User Name: SGF\Private ID
  - Password: Password
  - Wireless Network: access 30
  - Authentication: PEAP

(You can have other authentication methods checked, but PEAP is required.)

5. Press "Connect" to connect to the wireless network.

6. Press "Continue" when asked to verify the certificate.
