# Windows 2000

1. Click "Start" » "Settings" » "Control Panel". Double Click on the "Network and Dial-up Connections" icon.

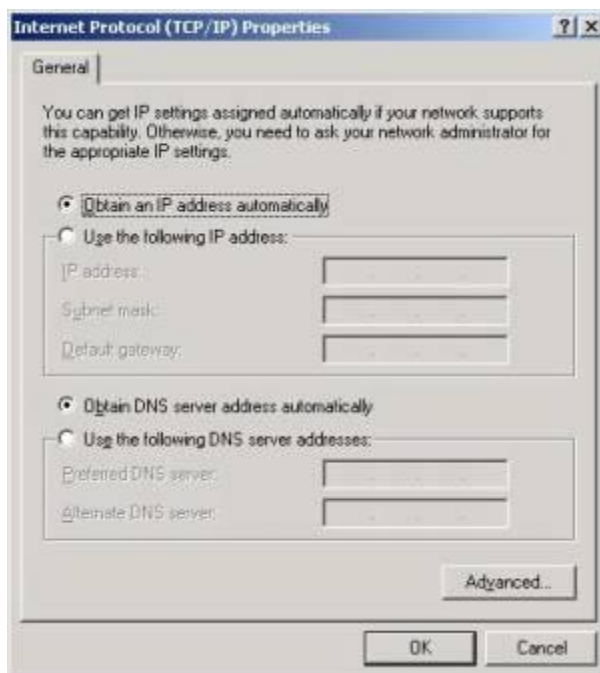

2. Right-click on "Local Area Connection" and select "Properties".

3. Select "Internet Protocol (TCP/IP)" inside the white box. (If there are multiple TCP/IP options, select the one that has your Ethernet Adapter listed after it.)
Click on the "Properties" button.

4. Verify that "Obtain an IP address automatically" is selected.

5. Click the "Ok" button then click the "Close" button in the Network Control Panel.
6. If asked to restart your computer, select "Yes". (Your Windows CD may be required.)
