# Configuring Access 40 on Mac OS X (10.4) - Tiger

1. First select **Open Internet Connect...** from the wireless icon in the menu bar (or from the Applications folder).

2. From the file menu select **New 802.1X Connection...**

3. From the Configuration selection box choose **Edit Configurations...**

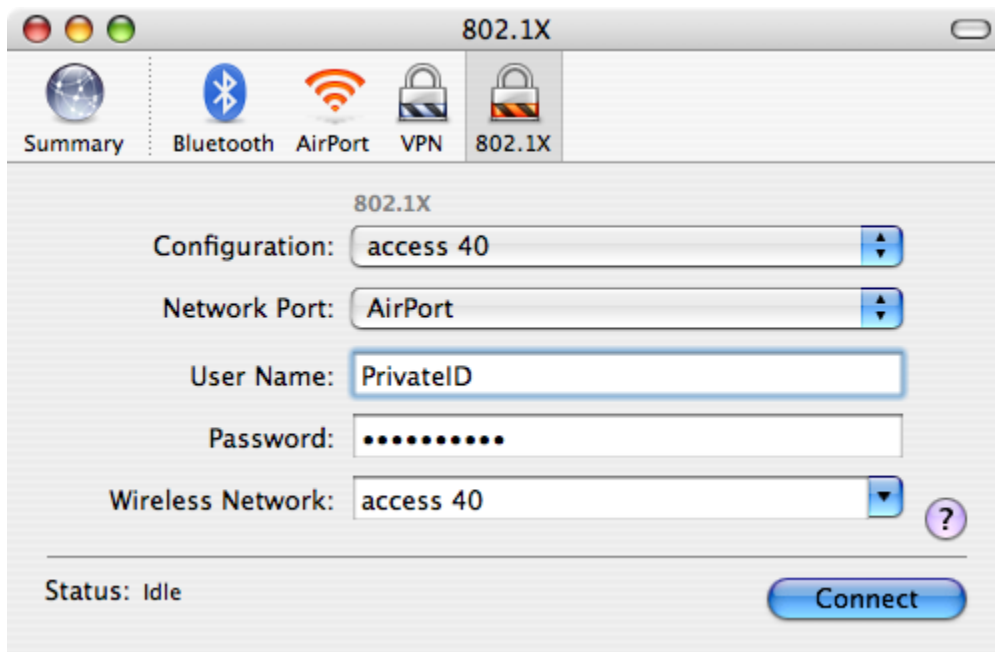

4. Next, fill out the Description, User Name (Private ID), Password, and Wireless Network fields as shown below.
   - o   User Name: **Missouri State Private ID**
   - o   Password: **Missouri State Password**
   - o   Wireless Network: **access 40**
   - o   Authentication: **PEAP**

(You can have other authentication methods checked, but PEAP is required.)

5. Press **Connect** to connect to the wireless network.

6. Press **Continue** when asked to verify the certificate.
